

Dear Valued Supplier,

Following the successful rollout of Icertis Releases 1A and 1B, we are now preparing for **Release 1C, scheduled for 7 July 2025**. This final release completes the implementation of Icertis, after which **all active contracts will be managed within the Icertis platform**.

As part of this transition, we are approaching the **system freeze for CLMS**—the platform currently used to manage your contracts. This freeze is a necessary step to enable the extraction and migration of contract data into Icertis.

Important Information

During the CLMS Freeze Period:

- **CLMS will be read-only** from the start of the freeze period until the system is decommissioned.
- **All communications** with your Woodside contacts must be via email during this time.
- **Any changes made in CLMS during the freeze** will not be saved or migrated to Icertis.
- **All documentation related to active contracts** will be migrated to Icertis, including contracts, variations, and key communications. **If you wish to retain any contract documents for your own records**, please download them before the CLMS system is decommissioned.

If you have any questions, please contact your Woodside Contracts Adviser.

Thank you for your cooperation and continued support.

Kind Regards,
Icertis Project Team
